

The Smarter Way to Build Your **Digital Business** Leveraging Odoo.sh

Fabien Pinckaers • 1st CEO & Founder at Odoo 1w • Edited • 🔇

Vendor lockin is, unfortunatelly, still the norm in enterprise software: difficult access to data, SaaS without access to code, can't move on premise or switch hosting, extra costs to get access to the API, etc.

Vendor lock-ins are too often a pain to move customer's legacy software to Odoo. **#Odoo** offers SQL dumps (open & clear format), full API control, CSV export tool on every model, ... we make it easy for you:

- own your data to leave Odoo, or integrate
- own your software to customize Odoo
- own hosting to switch easily: SaaS, Odoo.sh, on premise

This screenshot is my favourite's section of Odoo's homepage.

No vendor lock-in

No proprietary data format, just PostgreSQL: you own your data. No software lock-in: you get the source code, GitHub access, and the flexibility to host on our infrastructure, or on premise.

Open source

Behind the technology is a community of 100k+ developers collaborating worldwide. We're united by the spirit of open source, and a common vision: "to transform companies, empower employees".

Odoo is available in two editions:

- Community: Open Source, 100% free.
- Enterprise: extra apps, infrastructure and professional services.

BUILD A DIGITAL BUSINESS

4 QUESTIONS TO ASK TO BUILD A DIGITAL BUSINESS

HEIGH HO! IT'S OFF TO BUILD DIGITAL BUSINESS & EXPERIENCES!

How can I generate more online revenue?

How can I reduce cost to serve?

How can I give employees what they need to be highly effective?

How can I break down siloes created by disparate technology?

B2B organizations can no longer compete on product or price. They need to take a note from what B2C organizations have done, and create an immersive, seamless, and enjoyable online experience. This cannot be done by a simple website with your business contact info plastered across each page. Everything from an individual's first exposure to your brand on your website to the depth of your knowledge base to answer common questions will make a lasting impact, which will ultimately play a huge role in if you get past the "research" phase of consideration.

Every business is seeking the treasure of superior experiences their customers desire and will come back for. However, actually hitting the motherlode will take a team strategically focused on digging in one particular area. Consider, if your people were able to direct their energy to the challenging, unique needs of each customer, wouldn't they be more effective and, in turn, the customer be more satisfied?

How absolutely frustrating is it to be asked to complete a task, judged by the quality of the task's completion, but not be given adequate tools to actually do the task or, worse, the knowledge of what to do? Many employees find themselves in this situation without a way to dig themselves out. It's time to mend this leaky bucket of a technology for an integrated, single source of truth for the organization.

The silent villain of any growing organization's story is silos. This enemy only grows in power as more and more technology gets added on, further complicating the maze of disparate technologies and preventing the digital transformation businesses desire. What's missing to take down this villain is a flexible foundation that can bring systems, applications, and data together: an integration platform.

B2B digital commerce

GARTNER

By 2025, B2B organizations with digital commerce offerings will see 30 percent more revenue and a 20 percent reduction in costs, compared to competitors without
